HI MESS represents health care professionals in many professional areas:

* Clinical Systems
* Information Systems
* Information Security
* Management Engineering
* Telecommunications

HI MESS members are responsible for developing many of today’s key innovations in health care delivery and administration, including telemedicine, computer-based patient records, community health information networks, and portable/wireless health care computing.

The South Florida and Central & North Florida Chapters of Health Information Management Systems Society (HI MESS) has joined together to convey our mission of transforming healthcare through the effective use of information technology and management systems to our policy makers at our annual HIT Days at the Capitol, establishing the State of Florida HIT Week as March 23-28, 2015. Public and private healthcare constituents – representing the full spectrum of healthcare interests – will convene in Tallahassee, FL on March 23 & 24, 2015, in honor of this event.
